

## Cut Vinyl Stickers

Machine cut stickers from your Illustrator data out of high-quality coloured sticky vinyl.

Great for office and shop signs, vehicle branding, sticking to surfboards and snowboards&hellip;Please note that these stickers are not 'printed', merely cut out shapes and can only be created from vector data - ie no Photoshop or jpeg data.

Turnaround: 5-7 working days (weekends/holidays excluded). Stickers are delivered ready-to-stick with a transparent application layer.

For instructions on how to apply the stickers click 'Read more'. 20 Colours to choose from!

How to apply your cut vinyl stickersYour stickers arrive stuck to backing film and covered with a transparent application sheet.

Follow these steps to apply your stickers to the intended surface.

What you will need:

A clean cloth  
A bottle of glass cleaner or other mild detergent  
A spray bottle of water and washing up liquid solution (for larger stickers)  
An old credit card (the squeegee)

Step one: prepare the surface

Using a mild detergent clean the surface to which you wish to apply the stickers carefully. Remove unwanted dust and grime and dry with a lint free cloth.

Step two: peel away the backing film

Lay the sticker down on a flat surface. Carefully peel away the backing film so that the sticker is now attached to the transparent application (transfer) sheet only. The sticky side will be exposed.

Step three: apply the sticker

For small logos and stickers simply align the sticker carefully and smooth it out with your hands to apply it. Once in position it cannot be moved, so use great care. Go over the surface with your credit card, paying particular attention to the corners and small details. For larger logos and lines of text, ask a friend for help and use the wet method. This involves spraying the surface with a mild water and washing up liquid solution before attempting to position the sticker. The wet method will give you a little freedom to adjust the position a little without damaging the vinyl. Wait about 10-15 minutes for the sticker to dry, sometimes you will have to let the sticker dry out a lot longer before removing the transfer sheet, depending on size and amount of solution used.

Step four: remove the transparent transfer sheet

Carefully peel off the transfer sheet and using a pin, pop any bubbles that may have appeared and smooth them over.
